

How to Remove Tourists from your photos - Legally

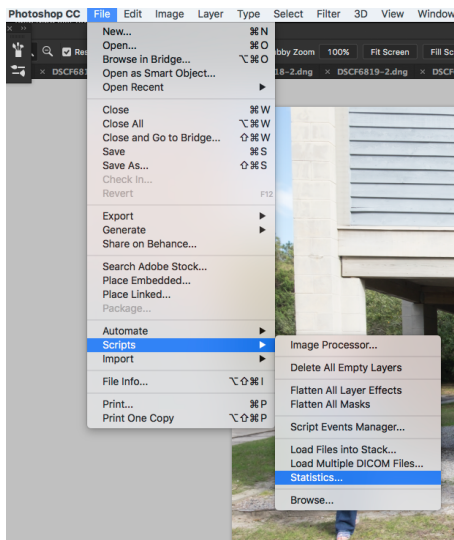

Photoshop has a new feature that removes moving objects from your scene.

To do this you'll need a camera and a tripod and a shutter release.

Set up your camera and take 10-15 shots of a scene with moving subjects, like tourists, cars, etc. This works best if you see the subjects moving, if they stop moving, PHOTOSHOP CREATIVE CLOUD will not know what to remove.

Import your images into PHOTOSHOP CREATIVE CLOUD. This will take some time. depending on how many images you have.

Now Pull down File>Scripts> Statistics

Make sure the Stack Mode is Mean and Click Add Open Files. Click Okay.

Now PHOTOSHOP CREATIVE CLOUD scans the images, removing the moving objects and preserving the Static elements.

When done you should have an image that shows just the Static Elements of the scene.
